

LEIGH VINCENT M. ESCLANDA

PHP Web Developer

Having completed my studies in Information Technology at the Technological Institute of the Philippines, I have a solid background in web development, database administration, and IT assistance. My educational background and practical experience building PHP web applications have given me the ability to design solutions that are scalable, practical, and easy to use. I am committed to lifelong learning and making valuable contributions to a team atmosphere. I am eager to use my technical expertise in a professional situation.

WORK EXPERIENCE

● Computer Technician

Philippine Public Safety College (July 2024 – September 2024)

I was hired as a Computer Technician but my main responsibilities revolved around developing PHP web applications(Frontend and Backend) tailored to the company's requirements. I initially joined the company as an intern, but with my strong development skills and contributions to the projects assigned, I was offered a position in the company. During my time with the company, I successfully developed three web applications, including the Certificate of Appearance System, Asset Management and Inventory System, and E-Student Information System. Two of these are deployed on the internet, showcasing my ability to deliver functional and scalable solutions. My work included creating efficient, user-friendly systems that improved internal workflows which showcase my passion for web development.

- Tested web applications to ensure that they are ready for deployment.
- Deployed tested web applications to the web.
- Assisted in the installation of new equipment and conducted regular system updates.
- Troubleshoot issues and performed repairs when necessary.

Backend PHP Developer

AST Shipping Company (December 2024 – Present)

In charge of updating and maintaining the backend system of the Filipino seafarer's job seeker platform, pinoyseaman.com. Improved security, brought out-of-date PHP code up to date, and guaranteed peak performance for a production-level deployment environment. Additionally, I created and managed a number of internal web apps that enhanced corporate efficiency, centralized open position for jobs as well as disembarkation digitalization. Currently working with the backend redevelopment of pinoyseaman.com with new features, including a subscription-based model, set for deployment by the end of May.

- Rebuilt and secured legacy backend code using modern PHP practices, optimizing performance and maintainability.
- Handled web server, domain, and database management for live deployments, ensuring minimal downtime and fast issue resolution.
- Designed and developed internal tools such as the Disembarkation Web App and Open Positions Database for efficient seafarer data management.
- Developed the backend integration of new features for the platform's full redesign, including user subscription and membership tiers.
