To whom it may concern,

I am writing to express my strong interest in the Web Application Developer position at your company. I recently graduated with a Bachelor of Science in Information Technology from the Technological Institute of the Philippines, where I gained a solid foundation in web development, database management, and software engineering. With hands-on experience in PHP, MySQL, and Laravel, along with a proven track record of developing impactful web applications, I am eager to bring my skills to your team.
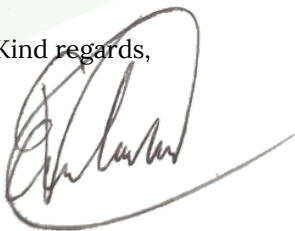

During my internship at the Philippine Public Safety College, I developed the Certificate of Appearance System, a web-based solution enabling user visit verification through webcam integration, with administrative oversight for generating PDF certificates. Impressed by my contributions, I was absorbed by the company, where I spent three months building two additional systems: the Asset Management and Inventory System, which tracks asset and inventory movements within the organization, and the Student Information System, a centralized platform for student data management. Both the Certificate of Appearance and Asset Management and Inventory System are now live, hosted via A2Hosting and cPanel.

Following that experience, I was hired by AST Shipping Company as a Backend Developer, where I was tasked with reviving, redesigning, and updating the backend code of pinoyseaman.com. I modernized legacy PHP code, implemented essential security features, and managed the hosting and database systems in a live production environment. I also built additional web applications for internal use, including a Disembarkation Web App for seafarers and a centralized Open Position Job System to manage job vacancies efficiently. Currently, I am leading the backend redevelopment of a fully redesigned pinoyseaman.com website, which includes the integration of a subscription-based model and other new features, with deployment scheduled for the end of May.

In addition to my professional experience, I developed a comprehensive web application during my final year at TIP as part of our capstone project. Titled RentHub: An Online Location-based Home Rental Management System, this Laravel-based platform featured location-based filtering, tenant-owner communication tools, contract creation, payment tracking, and receipt submission functionalities. These projects not only honed my technical expertise but also strengthened my problem-solving and collaboration skills.

I am eager to contribute to innovative projects and believe that my background aligns well with the requirements of this role. I look forward to the opportunity to discuss how my skills and experiences can add value to your team. Thank you for considering my application; I am available for an interview at your convenience.

Kind regards,

09173679314
